

## Final Project Proposal

### Your Bot Friend

We will create a bot that acts as your friend. Firstly, you'll name it, and then it'll provide you options of what you can do with it. One option is interacting with the bot to ask for a recommendation, which it will provide based on your answers to its questions. This option allows you to keep track of the recommendations the bot gives you. Another option is playing a game, and the bot will be able to play a couple of games with the user, including Guess-a-Number, MadLibs, Ending-Letter Game, and Hangman. A third option is giving bad therapy, which will be a form of conversation with the bot.

As a challenge, we will try and stretch the recommendation option to include a feature that allows the user to input a certain story they like, and if that story exists in the bot's library, it will give a recommendation based on the user's input.
